

INFECTION ECOLOGY & EPIDEMIOLOGY

THE ONE HEALTH JOURNAL

Infection Ecology & Epidemiology is a peer-reviewed Open Access journal aiming to be a truly international forum for the free exchange of original, cross-disciplinary, high quality papers from researchers in multiple medical and ecological disciplines engaged in describing the complexity of zoonotic infections and what exactly happens at the interface between wild and domestic animals, and humans. Of particular interest at present is the growing global problem of antibiotic resistance.

Target groups include veterinarians, physicians, molecular biologists, ecologists, and environmental chemists with an interest in zoonotic infections.

ADVANTAGES

- Open Access
- Rapid publication process
- Easy archiving
- All content immediately deposited upon publication in PubMed/PubMed Central
- No charge for colour images, multi-media or other supplementary elements
- No publication fees

TOPICS COVERED

- Zoonotic microorganisms
- Vector borne infections
- Gastrointestinal pathogens
- Antimicrobial resistance
- Zoonotic microorganisms in a changing environment
