One Health Initiative

The interplay among zoonotic infections and their link to human disease has long been the province of mosquito control professionals. The American Mosquito Control Association is most supportive of comprehensive collaboration among epidemiologists, veterinary practitioners, environmental scientists and medical entomologists. The integration and leveraging of these discipline's expertise will produce a more complete knowledge of the intricacies of vector-borne diseases and the means to control their devastating impacts on humans, animals and the environment. The One Health Initiative provides the ideal platform for this exchange of ideas and can serve as a transformative model for researching and discovering new methodologies for ensuring the health of our natural world.
